5. SSL/TLS Security

Status:	Valid
Issuer:	Google Trust Services
Valid From:	2026-05-18T18:35:21+00:00
Valid Until:	2026-08-10T18:35:20+00:00
Serial Number:	283345452967219606464545296724364353355
Signature Algo:	sha256WithRSAEncryption

6. Security Headers

Overall Score:	N/A
Strict-Transport-Security:	Missing
Content-Security-Policy:	Missing
X-Frame-Options:	Present
X-Content-Type-Options:	Missing
Referrer-Policy:	Missing
Permissions-Policy:	Present

7. Email Security

SPF Record:	Missing
SPF Status:	Missing

OpenRecon Security Assessment Report

Generated on: 2026-06-06 07:10:14

DMARC Record:	Present
Policy:	reject
DKIM Hint:	Not Found (Passive)

8. Technology Stack

Server:	gws
Aggregated OS:	Unknown

9. Open Ports

- 80/HTTP - No banner
- 443/HTTPS - No banner

10. Detailed Network Footprint

Total Unique IPs:	82
Unique ASNs:	1
Hosting Providers:	Google Cloud
Cloud IPs:	20
Unprotected IPs:	20 (142.250.31.139, 192.178.218.101, 142.251.167.113, 172.253.63.101, 142.250.31.101, 142.251.167.100, 172.253.62.102, 172.253.62.139, 173.194.45.138, 216.239.45.33, 142.251.163.100, 142.250.31.138, 142.251.163.139, 192.178.218.139, 172.253.63.138, 172.253.62.100, 216.239.32.220, 172.253.115.102, 172.253.62.129, 173.194.45.101)

11. Public Files & Code Leaks

Found Files:

- robots.txt
- sitemap.xml
- .well-known/security.txt
- humans.txt

Insights:

- security.txt present (VDP enabled?)

12. Historical Intelligence

No historical data available (Archive returned no significant results).

OpenRecon Security Assessment Report

Generated on: 2026-06-06 07:10:14

13. Strategic Intelligence (General)

Exposed Administrative Interface [Medium]

Critical administrative or internal operational surfaces are exposed to the public internet. This convergence of sensitive subdomains and management ports significantly increases the risk of unauthorized access.

- High-risk subdomains detected: admanager.google.com, admin.google.com

Weak Email Security Posture [Medium]

The domain lacks strict email authentication controls (SPF/DMARC), creating a high risk of domain spoofing and phishing attacks impersonating the organization.

- SPF Record: Missing completely.

Data Leakage & Information Disclosure [High]

Sensitive internal information or source code is publicly accessible, potentially exposing credentials or internal logic.

- Public File: security.txt present (VDP enabled?)

14. Attack Path Prioritization

Simulated attack vectors based on OSINT inferred converging risks.

Path: Staging Environment Exploitation [High]

****Simulated Scenario**:** An attacker could target non-production environments (dev/stage). using Subdomains: borgmon.eventflow-test.adz.google.com, frame.ads-devel.qa.adz.google.com.

****Effort**:** Low | ****Stealth**:** Stealthy (Often unmonitored)

Execution Sequence & Evidence:

- Step 1: Target non-production environments (dev/stage).
- Step 2: Exploit likely weaker security controls (debug mode, default passwords).
- Step 3: Pivot from staging to production via shared secrets or database connections.
- Evidence: Found 2 non-production environments.

Path: Cloud Infrastructure Bypass [Medium]

****Simulated Scenario**:** An attacker could target direct ip addresses bypassing waf/cdn. using 20 Unprotected Cloud IPs Identified.

****Effort**:** Medium | ****Stealth**:** Stealthy (Direct IP access)

Execution Sequence & Evidence:

- Step 1: Target direct IP addresses bypassing WAF/CDN.
- Step 2: Access application origins directly to evade IP restrictions.
- Step 3: Scan for cloud metadata services (SSRF).
- Evidence: Found cloud origins exposed directly to the internet.

OpenRecon Security Assessment Report

Generated on: 2026-06-06 07:10:14

Path: Administrative Interface Guessing [Medium]

****Simulated Scenario****: An attacker could target exposed administrative subdomains. using Subdomains: admanager.google.com, admin.google.com.

****Effort****: Medium | ****Stealth****: Noisy (Active Auth)

Execution Sequence & Evidence:

- Step 1: Target exposed administrative subdomains.
- Step 2: Identify login portal technology (e.g., WordPress, Okta, Custom).
- Step 3: Attempt credential stuffing or default credential login.
- Evidence: Found 2 admin-related subdomains.
